Oh! Okay, now I get it. In a rare fit of caution, I decided to ask before pressing the button.

Hi Dave,

Sorry for slow response today , chainsawing a 80 ft tree that fell in our yard.

If you do the update, then DualSpectrograph.exe should appear in the regular prog files/ spectrograph directory. The old spectrograph.exe will not be modified. Didn't that work for you Dick? Then you need to make a shortcut to this new exe as it will not be listed under Programs.

Aloha,  
Jim

Hi Jim,

I'm a little confused. If I apply DualSpec Update 2.2.7, will it overwrite my existing Spectrograph.exe file?

I do not see the DualSpectrograph.exe file you mentioned; it's not in your /spec web directory. Where might it be?

Hi Guys,

The PC side software is working in most respects. It will display both charts simultaneously in live mode. I have some testing to do regarding saving and redisplaying. I believe the offset and color gain controls are working.

The scope (spectrum analyzer) view works but we had discussed coming up with a way to calibrate this view. This has not been done.

I have yet to redo all of the features such as slope finding. These I will begin working on as soon as I feel confident about the saving and loading functions.

I do not suggest using the new software with your old devices yet. Eventually, I want there to be just one program but now you should use the new DualSpectrograph.exe just for the new hardware. Both programs must reside in the Spectrograph directory and you should just create a new shortcut to the dual spec exe on your desktop.

The last stage will be seeing if we can do A-B or B-A or some other function.

Look at <http://radiosky.com/spec/> for the latest update. Currently this is SpecUpdate\_2\_2\_7.exe

Great to closing in on getting this guy on the air. Any chance of catching some DP Jupiter this apparition?

Aloha,  
Jim

Hi Jim!

How goes it? I hope your back is getting better, at least a little bit if not more.

What is the current state of the DPS PC-side software? I gather from Dick that he'll be sending the hardware to me in the next few days.

Do you have a link available where I can download the software, or are there still tweaks you'd like to make to this initial version?

As always, no rush. I won't have the hardware for at least a week.

Thanks Jim!

By the way -- is the new radiojove.org site your coding? Nice job, looks good!
