Version 2.4.19

- Changed interface to Jupiter Information Server (JIS) which is part of Radio-Jupiter Pro. RSS can access information from JIS and display that information in the top and/or bottom banner. You may display any of the following fields from JIS:

DATE
TIME
LMST
JUPALT
JUPAZ
SUNALT
SUNAZ
JHA
SHA
CML3
IOPHASE
ACTIVEMODE

To select the fields you wish to display go to Options / Network /Radio-Jupiter Pro Information Server / RJP JIS Options. Check the boxes of the fields you want and click OK.

To activate select Options /Network /Radio-Jupiter Pro Information Server / Connect to RJP. Then click on the banner(s) that you want to display the information and type the <JIS> placeholder where you want the fields to start in your banner. For example your banner input might be: <DATE> My Observatory Name <JIS>

The JIS fields are updated whenever the upper spectrum is completely renewed with data.

- Corrected some cosmetic issues with the status bar.
