Hi Jim - When I first tried the latest update, it showed an endless cycle of downloading. I tried a couple times and the last time I just let it go to see what happened. Eventually, this error window popped up:

However, about a minute later the installation window appeared and I was able to complete the installation.

Not sure what happened, but I now have v2.4.20 running.

Whit pointed out a problem with the installation.
I have fixed the version problem in the installation script. Please try doing the update again.

Sorry for the trouble,
Jim

Hi Jim - I ran RSS and it alerted me about the update. I double-clicked the link and downloaded and ran it with no problems. However, when I restarted RSS, it still showed v2.4.19.

I repeated above but RSS still showed v2.4.19.

I also tried manually downloading and installing the update but got same results. The spectrograph.exe file in my Program Files is date-stamped 12/15/2014 and it is v2.4.19.

Version 2.4.20

- Changed Correction File from tab delimited to comma delimited
   format (*.csv) so that it can be directly loaded into a
   spreadsheet program.

- Updated RTL Bridge to allow connection to a rtl_tcp stream
   from another computer. Previously RTL Bridge had to run on
   the same PC as rtl_tcp.exe using the fixed loopback address
   of 127.0.0.1 and port 1234. These are still the default
   values.
