I found two relatively small bugs in RSS 2.7.0 which I will fix after I get some feedback from others on any other issues you might find .

- Once you turn on Correction files, RSS will always load with Correction Files being applied. You have to manually go to **Options / Correction Files** and uncheck **Use Correction Files** to turn it off.
- Do not attempt to use the **View / Chart Info** for a live chart in Client Mode.

Version 2.7.0

http://radiosky.com/spec/Spectrograph_Update_2_7_0.exe

- Added support for SNTP time correction. Options / Atomic Clock
- Time corrections now in metadata.
- Fixed problems with Correction Files
- Sampling for period for creating correction files adjustable.
- Re-arranged menus.
- Fixed bug where files saved in Client Mode could have wrong number of channels.
- Addressed bug that allowed servers to drop off the list.

Please let me know what doesn't work. I have tested for a couple of days, but stuff sometimes breaks when I am fixing something else and one soon realizes there is no end to that. With so many changes I expect some problems but if you let me know I will try to fix it ASAP.

You don't have to have a receiver to test this program. You can use it to connect to our few regular servers in client mode.

Thanks,
Jim Sky
