Version 2.8.16

Adds support for Antenna Azimuth, Antenna Elevation, and Antenna Polarization metadata. For now antenna parameters are grouped with Identity.

Removed Antenna Orientation metadata fields.

Revamped the publishing code, especially portions related to WAN address acquisition and changing. This should fix the problem with WAN IPs that change.

Added metadata fields to the PNG and JPG files. Please note that this metadata is not embedded when you use other picture saving methods such as the Windows Snip Tool or ALT-Print Screen. You can view the embedded metadata using File / Review JPG/PNG Comments.

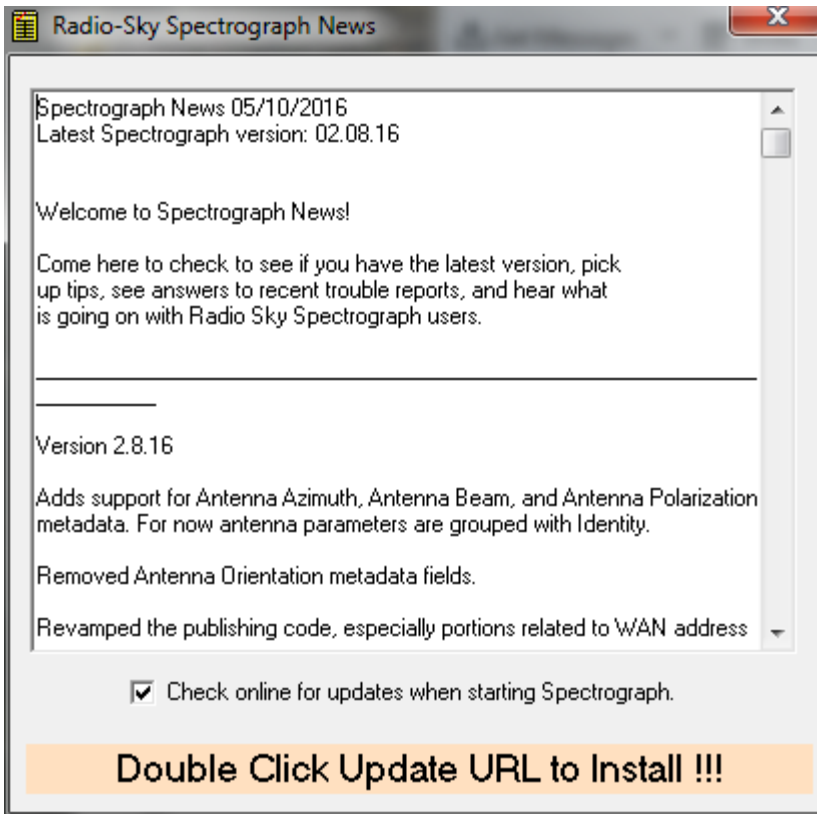

Fixed difference in color between averaged screens on dual polarization displays.

Fixed problem where Link Controls was sometimes disabled.

=====

To update you can use the link below but if you have not tried it, I suggest you use the Update facility in RSS. Go to Help / Check for updates.

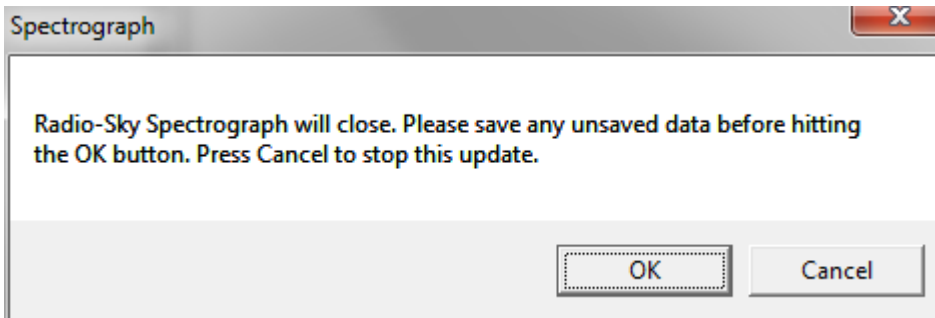

You will get

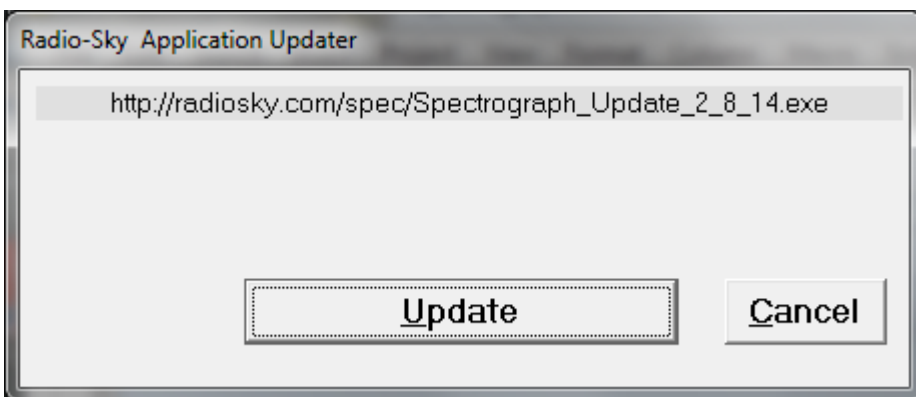

Scroll down and double click the link

http://radiosky.com/spec/Spectrograph_Update_2_8_16.exe

You will then be instructed to save anything you need to save in RSS.

Click OK and you get

Click Update and the update will be downloaded to a sub-directory of RSS. You will have it saved for future use if you need to drop back from future updates. The update will start and you will click through the screens as always.

Aloha,
Jim S
