Dave I don't think I answered you.

ver 2.9.43
"Added the ability to use human readable internet addresses. If you
set up a DDNS account you can acquire such a permanent web address.
In Client Mode right click on the green list area and select Enter
IP Manually. You may now use a human readable address in the
address area. for example: radiosky.ddns.net "

I am going to make this easier so it maintains a list of DDNS accounts you have connected to
next version.
Jim
