

Subject: [Radio JOVE] #RSSupdate Version 2.9.63 released,
From: "Jim Sky" <radiosky@radiosky.com>
Date: 5/24/22 02:16
To: radio-jove@groups.io

There is a lot in this update, but most importantly, I believe the file saving issue (really an out of memory error) is quashed. I am just going to copy the update message used. Please let me know as soon as possible if you encounter any issues with this installation. Link at the bottom of this announcement. Please read this before updating:

Version 2.9.63

**** This is a highly recommended update. ****

This version fixes more "out of memory" problems that were caused by large sps files. Files created with v 2.9.59 did save, but large files sometimes failed to convert the temporary (spt) files to their permanent versions (sps). Those files can be salvaged by loading the spt file and applying the known sample rate or end time.

This version fixes a problem where users in countries that use a comma as the decimal separator, were receiving wrong Y axis scale values in the legend.

This version allows streaming a single channel to Radio-SkyPipe via the UDS interface. Alternately, the entire average spectrum may be still sent to Radio-SkyPipe.

JPG or PNG images created with Spectrograph camera button can be used to set the viewing area of a loaded SPS file to match that of the image. Sharing images made this way will allow others to quickly see if their chart has a corresponding feature. To trigger this action, select "File / Review JPG/PNG Comment" and then select the file shared by the other observer.

The Session Log window has been enlarged and now has a "Copy to Clipboard" and a "View a Log" button to open an existing log in notepad. I urge you to allow your logs to be automatically saved so they can be shared when problem solving.

Installations now force RSS to be Run as Administrator!

Uninstalling now removes all registry settings for RSS. If you want to keep your settings, do not uninstall RSS between updates.

Installations now come with backup copies of the default SDRPlay configuration files.
