Version 2.9.76 is available.

Besides bug fixes there are some changes that you should be aware of.

- *When an observation run finishes, the file is automatically loaded, so you don't have to manually load it to inspect it.*
- You can now automatically save a image of your entire observation when it ends. **Options / File Saving / Image AutoSave** and check the box "**Save Full View Image after every observation.**" This image file will be automatically loaded when selecting "Full View" instead of the slow recalculating of the much averaged Full View image. This make possible quickly jumping back to the full view image to select regions for closer inspection. To use, **Options / File Saving / Use Full View Image File** must be selected.
- A bit of image processing (background suppression) is available using **Color / Apply Median Offsets**. You can't save the modified data, only a picture of it.

For those who need to manually install the file is at: http://radiosky.com/spec/Spectrograph_2_9_76.exe

Otherwise do **Help / Check for Updates** in RSS and double click on the update link.
