Version 2.4.15

- Added Spectrograph News and easier update capability. From now on use Help / Check for Updates to access this window. Double click the update URL to install.
- Moving the mouse over a loaded chart now attempts to display the raw value of the sample under the pointer. The correct pixel may not be the one at the very tip of the pointer.
- The color scale in the lower right now reacts to the mouse by displaying the percentage of the color file range and the calculated raw value that would be approximated by the color under the pointer.
